

## **A revised catalogue of mosses reported from Borneo**

### **Abstract**

All updated checklist of mosses of the island Borneo is presented. All records from previous literature LIP to the middle of 2005 are compiled with information on the synonymy, type, and locality. Type information is provided for taxa originally reported from Borneo. This new checklist is composed of 721 species, subspecies, varieties, and forms, representing 185 genera and 50 families. *Distichophyllum scabrisentum* is newly synonymized with *D. malayense*. One new combination is proposed: *Fissidens crispulus* Brid. var. *fontanus* (M.Fleisch.) M.Suleim., H.Akiyama & B.C.Tan. *Ectroptotheceium neoperrevolutum* (Broth.) M.Suleim., H.Akiyama & B.C.Tan is proposed as a new name to replace *Ectroptotheceium perrevolutum* Broth.
