

**A new species of *Epirixanthes* (Polygalaceae) from Imbak Canyon, Sabah,
Borneo**

Abstract

The mycoheterotrophic genus *Epirixanthes* Blume is a small genus of Polygalaceae. Here, we describe a new species of *Epirixanthes*, *E. confusa* Tsukaya, M. Suleiman & H. Okada, discovered in the mostly unexplored Imbak Canyon, Sabah, Borneo. Along with photographs and illustrations of this new species, a revised key to the genus is presented.
