

Two New Lobane Diterpene from a Bornean Soft Coral, *Sinularia* sp.

ABSTRACT

Two new lobane diterpenoids, prenyl- α -elemenone (1), ent-prenyl- β -elemene (2) (stereoisomer), and a known compound, α -murrolene (3) were isolated from a population of Bornean soft coral *Sinularia* sp. The structures of these compounds were elucidated on the basis of spectroscopic data, including 2D NMR and HR-MS spectra. Compounds were tested for their cytotoxicity and antibacterial activities against antibiotic resistant clinical strains.
