Abstrak

Tujuan utama kajian ini adalah untuk melihat hubungan di antara sokongan sosial dengan kadar relaps di kalangan penagih separa pulih di Sabah. Kajian ini juga melihat samada terdapat perbezaan sokongan sosial mengikut etnik, jantina dan tahap pendidikan di kalangan ibu bapa, saudara, kawan dan jiran penagih separa pulih. Kajian ini juga memberi tumpuan kepada samada terdapat perbezaan sokongan sosial yang dipersepsikan oleh penagih separa pulih mengikut etnik dan tahap pendidikan. Selain itu, kajian ini juga melihat kepada perbezaan dari segi etnik terhadap kadar relaps. Soal selidik Sokongan Sosial 1 (SSS.1) dan Soal Selidik Sokongan Sosial 2 (SSS.2), dibentuk untuk mengukur sokongan sosial dan sokongan sosial yang dipersepsikan. Kedua-dua alat mempunyai tahap kebolehpercayaan iaitu 0.71 dan 0.82. SSS.1 telah diedarkan kepada 172 orang banduan dadah di Penjara Tawau, Penjara Sandakan dan Penjara Kota Kinabalu (Lelaki dan Wanita), manakala SSS.2 diedarkan kepada 175 orang ahli keluarga, kawan dan jiran penagih separa pulih. Soal selidik yang telah diisi dikumpulkan dan diklasifikasikan mengikut etnik Kadazan/Dusun, Bajau, Cina, Melayu dan lain-lain). Hasil analisis menunjukkan bahawa terdapat hubungan yang signifikan di antara sokongan sosial dengan kadar relaps di kalangan penagih separa pulih. Keputusan juga menyatakan bahawa tidak terdapat perbezaan dari segi etnik, jantina dan tahap pendidikan ke atas pemberian sokongan sosial di kalangan ibu bapa, saudara, kawan dan jiran penagih separa pulih. Pada masa yang sama, tidak terdapat perbezaan sokongan sosial yang dipersepsikan oleh penagih separa pulih mengikut etnik dan tahap pendidikan. Selain itu, hasil kajian juga menunjukkan bahawa tidak terdapat perbezaan kadar relaps mengikut etnik di kalangan penagih separa pulih.

**Relationship Between Social Support With Relapse : A Multiracial's Study At
Sabah, Malaysia.**
