

**Teanol, a new brominated sesquiterpene from the Thailand *Laurencia mariannensis***

**ABSTRACT**

We examined the constitution of *Laurencia mariannensis* collected from the east coast of Tean Island, Thailand. The structure of a new brominated rearranged cyclolaurane-type sesquiterpene, named teanol (1), is reported. This is the first report on biology and chemistry of the Thailand red algal genus *Laurencia* (Rhodomelaceae, Ceramiales).
