

Taxonomical notes on the genus *Chaetomitrium* (Hookeriaceae, Musci) of Borneo

ABSTRACT

Taxonomical notes on the species of *Chaetomitrium* (Hookeriaceae, Musci) on the Borneo Island were provided, along with the reports of our own specimens from the island. Two new species, *Chaetomitrium darnaedii* H. Akiy. From East Kalimantan and *C. maryatii* H. Akiy. & M. Suleiman from Sabah were described. *Chaetomitrium everetii* Mitt. Ex Dix. and *C. cucullatum* Dix. Are newly reduced to synonyms of *C. orthorrhynchum* (Dozy & Molk.) Bosch & Sande Lac. and *C. leptopoma* (Schwaegr.) Bosch & Sande Lac. Respectively. *Chaetomitrium elmeri* Broth. Was firstly reported from the Borneo. Keys to the twelve species were also presented.
