

A record of the little-known Bornean Ferret Badger *Melogale everetti* at Gunung Alap, Sabah, Malaysia

ABSTRACT

The Bornean Ferret Badger *Melogale everetti* is one of the least known Bornean carnivores, currently classified as Data Deficient on The IUCN Red List of Threatened Species. No Southeast Asian carnivore has a smaller known distribution. Few confirmed records from the last decade exist. One was captured in a wire mesh live-trap baited with banana, at Gunung (Mount) Alap, Crocker Range Park, Sabah, Malaysia, in October 2010.
