

**Studies on Homalomeneae (Araceae) of Borneo XXII: a new species of Homalomena
[Chamaecladon clade] from Kionsom Waterfall, Sabah, Malaysian Borneo**

ABSTRACT

Homalomena kionsomensis Kartini, P.C. Boyce & S.Y.Wong is described and illustrated as a new species of the Chamaecladon clade, and compared with the one other species of the clade so far described from Sabah. Recognition of *H. kionsomensis* takes the Homalomena flora of Sabah to seven species, five of them described within the last decade. A key to described species is provided.
